### Short Project Description

We aim to create a document classifier that can classify about 10 different document types that are used in a business consulting/trustee/fiduciary company.

### Data Description

We will use the RVL-CDIP Dataset <https://adamharley.com/rvl-cdip/> and/or create our own mock data based on templates like UBS Banking statements.

### Cloud Service Integration

We do not plan to use any cloud service for this project; we will however check out the azure document intelligence stack.

Our project itself will expose an API that can be integrated in various software or cloud services.

### Kanban Tool

Teams and or GitHub.

### Experiment Tracking Tool

We might try out ClearML for this project. Or manually track Weights and Biases.
